

# Soil Hardener SH 125

A water-base Green Soil Hardener

JCC Soil Hardener SH 125 is a Unique formulation to Hardened loose soil and thereby prevention of soil erosion and reducing the dust pollution due to loosened soil.

SH125 is a single component water-base non-toxic bio-degradable solution made for hardening soil, its designed to spray over the soil and hardens the soil within 2 hours.

A Nano technology product has co-polymer molecules along with Nano particles forms a straight and cross linked to give strong bonding within the soil / aggregate.

Soil erosion is a natural process that occurs when water and wind carry away topsoil. In India, soil erosion is a major problem that affects a large portion of the country's land.

Dust pollution is a major contributor to air pollution in India, especially in urban areas. It's caused by a variety of factors, including construction, road dust, and agricultural burning.

Construction dust pollution is the release of dust particles from construction and demolition activities. It can cause health problems, environmental issues, and contribute to soil degradation and water contamination.

JCC SH 125 is unique formulation in India to address both Dust Pollution and soil erosion. With ease of Application and single coat we would be able to arrest both Dust pollution and Soil Erosion

JCC SH 125 can be sprayed ( ready to use solution ) on the soil, dries within two hours.
