

JCC PowerStrip BSC-1019 - Paint, e-Coatings & Powder Coating remover

A Paint & Powder Coating remover used to effectively strip hard powder, chemical & electro coatings from intricate hard shapes. It is a silicon-free formulation and is eco-friendly, contains no ODSs, biodegradable and non-carcinogenic.

Compatibility

It safely removes coating from most metals, ferrous, non-ferrous, plastic and silicon substrates.

Fact Action

Removes all kinds of paints quickly, depending on thickness, uniformity, paint coat and ambient temperature.

Area Coverage

Penetrates several layers of coating to break bonds between coating and substrate, depending on coat thickness.

Easy to Use

Used in an immersion tank at room temperature. It does not require any blasting, scrubbing to facilitate stripping. Once removed from the tank, any residue should not be rinsed off with pressurized water.

Prolonged service life

To minimize the loss through evaporation, PowerStrip BSC-1019 is formulated to evaporate slowly. Its useful life can be extended by covering the tank and periodically filtering the stripped solid particles.
